

DOOR HANDLE 05

Handle 05 is made of a rounded shape in solid wood and a forged steel neck. Its contour fits perfectly in the palm of the hand. The turning process reveals the softness of the material, the fineness of the grain, the lines of the veins, and the characteristic knots of the wood species used — cedar, oak, or walnut. The wood is selected by artisans committed to promoting the timber industry and respecting the environment. The trees come from responsibly managed forests, agricultural plots, private fellings, or offcuts.

DIMENSIONS

L 60 mm / l 88 mm / H 60 mm

MANUFACTURING LOCATION

Normandy region, France.

MANUFACTURING PROCESS

Each Inventaire product is the result of French, manual, and artisanal craftsmanship.

MATERIAL AND TECHNIQUE

Turned wood and steel.

Handle 05 is available in walnut, oak, or cedar.

This is a “living” material whose appearance may change over time when exposed to hands, air, water, or other elements. These natural changes contribute to the unique character and aesthetic of each piece.

USE

Interior passage door.

FINISHING

The wooden handles are protected with a balm made from beeswax and carnauba wax — a natural, bio-based product. Repeated use may diminish this protective layer, as can perspiration or humidity. To preserve the finish of your Inventaire wooden door handles over time, we recommend regularly applying the maintenance balm made with beeswax and carnauba wax, available on our e-shop. To enhance the product's shine, you can polish it using a soft brush or a suitable cloth.

INSTALLATION

The handles comes with Escutcheon 01, size small.

The handles are delivered with a 7mm x 80mm square spindle. While these can fit the majority of doors, your installation may require specific adaptations depending on the lock system or its thickness.

We recommend verifying this before confirming your order.

The handle's stability depends on the quality of your lock. Some lock spindles have play or a weak spring.

To ensure proper alignment and stability of the handles, please check the quality of your door lock before placing your order. For long-term handle stability, we recommend drilling a hole in the square spindle at the location of the retaining screw. Except in special cases, so-called «olive» handles may not be suitable for installation on both sides of the door. We encourage you to check the compatibility of a handle with your door before confirming your order.

ADAPTATION

If the 7mm square spindle is too large for your lock, you can purchase a 6mm square spindle with sleeves that allow increasing the thickness inside the handle.

If the 7mm square spindle is too small for your lock, you can buy a square sleeve to increase the thickness inside the lock.

Please note that the sleeves may cause slight play in the alignment of the handles or locks.

IMPORTANT NOTE

For outdoor use, the protection of the handles must be adapted and renewed regularly. However, please note that their appearance will change more quickly. The dimensions of the items may vary from piece to piece within a tolerance defined by Inventaire. These variations result from handcrafting, which gives each manufacturing step its own nuances specific to the process. These variations do not affect the functionality of the products. They give each item a unique character.
