

DOOR HANDLE 06

Handle 06 is a blacksmith's hammer head that was transformed long ago into a door handle. Found in a workshop in Normandy, it reflects a practice of reuse, where worn tools were adapted for new purposes. Shaped for the hand, its form shows how handcrafted objects can endure over time. The result is a small hammered iron handle, simple and functional.

DIMENSIONS

L 90 mm / l 52 mm / H 17 mm

MANUFACTURING LOCATION

Normandy region, France.

MANUFACTURING PROCESS

Each Inventaire product is the result of French, manual, and artisanal craftsmanship.

MATERIAL AND TECHNIQUE

Wrought iron hand-forged and hammered. This is a "living" material whose appearance may change over time when exposed to hands, air, water, or other elements. These natural changes contribute to the unique character and aesthetic of each piece.

USE

Interior passage door. For outdoor use, please refer to the section *Important Note*.

FINISHING

When cold, the artisan carries out the finishing process in three stages: first, a tinted patina is applied with a cloth; the patina is then worked with a fine brush; finally, a thin coat of finishing varnish is applied.

INSTALLATION

For optimal operation, all handles must be installed with a door plate or an Inventaire lock. The handles are supplied with a 7 mm split square spindle (various lengths). While these may be suitable for the majority of doors, certain installations may require specific adaptations depending on the lock system or its thickness. We recommend checking this before confirming your order. The retention of the handle depends on the quality of the lock. Some lock spindles may have play or an insufficiently strong spring. To ensure that the handles remain properly secured and aligned with the spindle, please check the quality of your door lock before confirming your order. Unless otherwise specified, so-called "olive" handles may not be suitable for installation on both sides of the door. We recommend checking the compatibility of the handle with your door before confirming your order.

ADAPTATION

If the 7mm square spindle is too large for your lock, you can purchase a 6mm square spindle with sleeves that allow increasing the thickness inside the handle. If the 7mm square spindle is too small for your lock, you can buy a square sleeve to increase the thickness inside the lock. Please note that the sleeves may cause slight play in the alignment of the handles or locks.

IMPORTANT NOTE

For outdoor use, the protection of the handles must be adapted and renewed regularly. However, please note that their appearance will change more quickly. The dimensions of the items may vary from piece to piece within a tolerance defined by Inventaire. These variations result from handcrafting, which gives each manufacturing step its own nuances specific to the process. These variations do not affect the functionality of the products. They give each item a unique character.
