DOOR HANDLE 09

Handle 09 is made from a straight wrought-iron bar, hammered and riveted to the neck. Found on the door of a workshop, it is an old bolt that has been reused as a handle. Small in size and simple in form, it is a modest, functional piece whose construction reflects a practical use of the materials and components available.

DIMENSIONS

L 93 mm / l 50 mm / H 19 mm

MANUFACTURING LOCATION

Normandy region, France.

MANUFACTURING PROCESS

Each Inventaire product is the result of French, manual, and artisanal craftsmanship.

MATERIAL AND TECHNIQUE

Wrought iron hand-forged and hammered.
This is a “living” material whose appearance may change over time when exposed to hands, air, water, or other elements. These natural changes contribute to the unique character and aesthetic of each piece.

USE

Interior passage door. For outdoor use, please refer to the section *Important Note*.

FINISHING

When cold, the artisan carries out the finishing process in three stages: first, a tinted patina is applied with a cloth; the patina is then worked with a fine brush; finally, a thin coat of finishing varnish is applied.

INSTALLATION

Nails are supplied for the installation of your door plates equipped with a thumbturn & release.
The thumbturn & release is welded to a 7 mm square-section spindle, 100 mm long.
The spindle length must be adjusted to suit the thickness of your door.

IMPORTANT NOTE

Please check the compatibility of the thumbturn & release and plate systems with your installation before placing your order.
The appearance of each item may vary within the tolerances defined by INVENTAIRE.
These variations are the result of handcrafting, which creates subtle nuances at each stage of the manufacturing process.
These variations do not affect the functionality of the products. They give each piece its own unique character.
